

Transition

What have we learned in this time the Hopi call
The Great Purification?

Thanks to Hummux and Kaluna, I was able to do a deep study of the work of José Arguelles which opened me to the fractal nature of time. Following through with some hints he left with us (combined with some local nudges) inspired a timeline that seems to resonate with Mayan, Toltec, and Kogi understanding of this transition. The purpose of much of this work is "mending the sacred hoop", a concept that came to us from the Chumash teacher Shokosh Aho.

José saw a relation between the roughly 26 thousand year precession of the equinox and the Mayan long count. Five long counts of 5,125.3 years each comes close to our present calculations for the precession cycle.

José called the first 13 thousand years of the previous cycle the Dragon genesis and divided the second half into an 8 thousand year Monkey genesis and a 5 thousand year Moon genesis. The Dragon genesis occurred during the Ice Age which was a time of severe testing for humanity, especially the people in the north. That's what made northern people pale so we wouldn't become deficient in vitamin D. People in the South experienced extended droughts.

December 21, 2012 completed one long count and began another. That date also marks the beginning of a new 26 thousand year precession cycle.

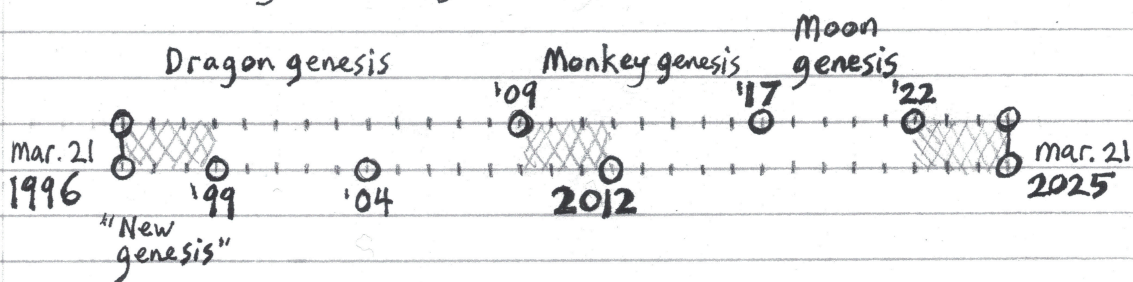

4 precession cycles equal 104,000 Tun (360 days) which approximates the length of the previous Ice Age.

"The End Falls into the Beginning"

In José's mytho-poetic telling, the 5ish thousand year moon genesis was to be a time of exploring our capacity for "magic flight". Instead it became a time of "psychic lockdown". Time is life is art became "time is money". So - if we somehow manage to **not** destroy ourselves with hyper-technological delerium, we get to explore time is life is art for a 26 thousand Year Moon genesis - a "resonant field beyond duality" that we began to enter in the year 2013.

The meaning of one aspect of a mysterious little glyph that presented itself to me spring equinox 1996 suddenly came to me in the summer of 2017. The result is the following timeline for the transition that the Toltec call "the dawn of the 6th Sun." - Sergio Magaña

Adding a 3 year "new genesis" period to a fractal compression of the previous precession cycle results in a 29 year transition period that resonates with the 29ish day lunar cycle.

The ratios 3:5:8:13... are the Fibonacci sequence that aproximates the Phi (ϕ) ratio with ever increasing accuracy. ϕ is a universal regenerative key.

$$\phi + 1 = \phi^2$$

$$1 + 1/\phi = \phi$$

Beyond War

What does that even mean?

We have a hard time imagining what a civilization without war would look like. The word "Civilization" has war written all over it. The very capacity to envision a society structured around mutually beneficial cooperation and an innate sense of fairness among and between different cultures has been traumatised out of us. Traumatized by what? "The Way of Kings" - War is the way of kings. People are people and just want to live. War makes living very difficult. People don't want that.

War used to be armys against armys. 90% of deaths and injuries were among the members of the armys. Now it is very different. 90% of deaths and injuries are among the people - women, children, elderly... This creates people who might want vengeance or protection from "them". Theory of the drone shows that the battlefield is potentially anywhere and forever.

The way of kings creates fear, pain, trauma... Violence begets violence until our actions and reactions bring about the end of the human experiment. Or until we EVOLVE beyond War.

Homeland and Diaspora

In the big picture Earth is our homeland in the vast spinning within spinning, shining void.

For us Homonids, homeland is Africa and all other earthly landmasses harbor "the diaspora".

Movement of the people is common and ongoing even when "nationalism" and the way of empire has made that difficult. The way of kings goes hand in hand with the way of empire, the expansion of which is done by negotiation, royal marriage or war.

The concepts of aboriginal and indigenous people comes about after the way of empire swept across the world drawing lines on the Earth. People who had been in a particular area for many thousands of years are First Nations or aboriginal and people who had been in an area for many hundreds of years are called indigenous. A friend who didn't like the term "third world" said "you mean people with culture?"

According to Father Charles Moore, who studied the way of empire, Turtle Island is the last stand of freedom.

In the Old Testament there is the description of a scene where the people, having rejected the LORD of hosts, request to have a king put over them (1 Samuel 8).

LORD of hosts: "In the Hebrew Bible, the name Yahweh and the title Elohim (literally 'gods', usually rendered as 'God' in English translations) frequently occur with the word ~~tz~~evaot... ("hosts" or "armies"...), Elohe Tzevaot ("God of Hosts")."

- wikipedia

"Adonai Tzva'ot, the "Lord of Hosts" is one of the names of God, used 235 times in the Bible... The literal meaning in Hebrew is "Lord of armies"..."

- oneforisrael.org

Kings assumed the divine right to rule because they were supposed to be "anointed by the gods".

And because they inherited the keys to the empire - law, sciences, crafts, writing, banking and mastery of propaganda. Kings need a managerial class to wield those keys, known as "the Meh" in ancient Sumer (See: Granting of the Meh - Inanna, Enoch - 'Synthesis Remembered Awakening original Innocence' by Father Charles Moore).

All of that looks very archaic but we have not yet liberated ourselves from the way of war, the Babylonian banking system, or the rule by people who hold the keys of empire.

As long as those things are still in place, "democracy" is an empty wish. And "home" is borrowed from the empirical powers (Genesis 47). Until ____?

We dreamed all that stuff up. "If we can dream it up, We can dream it down." - Caroline Casey

Culture Comes from the Earth

When a group of people inhabits a particular place for a long time, they learn how to integrate their activities with the climate and plant and animal communities of that place.

Culture arises from the social structures and activities that are in harmony with the dynamic balance of that ecosystem. After many generations there is an accumulated cultural wisdom establishing sustainable and regenerative practices.

A diversity of ecosystems results in a diversity of Cultures. Evolution is not just "survival of the fittest" as tested by competition, it is also survival of the cooperative.

Even more interesting is the observation that the evolutionary process includes survival of ? because constant change means it is a mystery as to what will work in the somewhat chaotic churn of evolution. I'm suggesting that the Universe is a novelty generator - Life is an ongoing experiment. We are discovering the principle: "Diversity is Resiliency."

Over the past 10 thousand years we have completed one Social/Cultural tapestry. During the first 5ish thousand years of the current interglacial period, we developed an agricultural layer to the ongoing social structures. Then we "turned the tapestry over" and began weaving a new vision for the next 5ish thousand years. The completed tapestry has an agricultural side and an industrial/financialisation side. Now we have an opportunity to do a deep collective revisloning as we begin weaving a totally new tapestry.

Until we set a fresh vision, all that can happen on the "world stage" is reruns of the same old movies. Unfortunately the spilled blood is real.

100% Responsibility (Ho'oponopono)

- means liberation from the gods -
- means there is no "them" -
- means no blame game -
- means remembering the splendor within -
- means give the blessing -

"May you feel the truth will be good for you"

Human Doing ♦ Human Being

Homo radiantes (Timeless)

Our Predicament -
Our Choice -

↑
→ Homo colossus (Dead End)

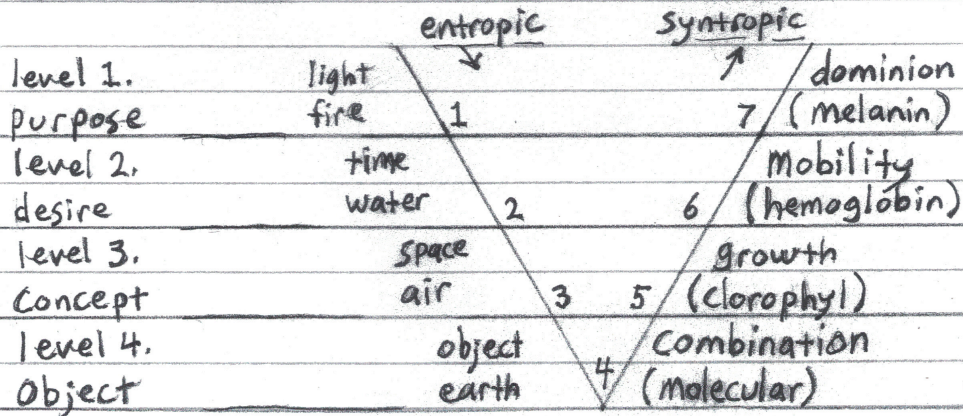

To stop projecting
the past onto the
future further.

Uses renewable resources 5
to 10 times faster than they
are renewed with reliance
on non-renewable energy
and resources.

Put another way -

"I make a cup of tea and stop the war"

Arthur Young's Arc as described in his book
'The Reflexive Universe' can help us understand our
predicament. This predicament is well described in
the book 'Overshoot' by William Catton who calls us
Homo colossus.

The descent of
light into
matter.

the turn

Evolving life -
using nature's law to
Self-organize into increasingly
complex living systems.

Each of the Seven Stages have Seven Sub-Stages.

Humans seem to be a stage seven creature (dominion/Stewardship).
we can see how we are evolving through the sub-stages.

Homo colossus / sub-stage six

Desire, domination, consumers, opportunistic

Catarpillar

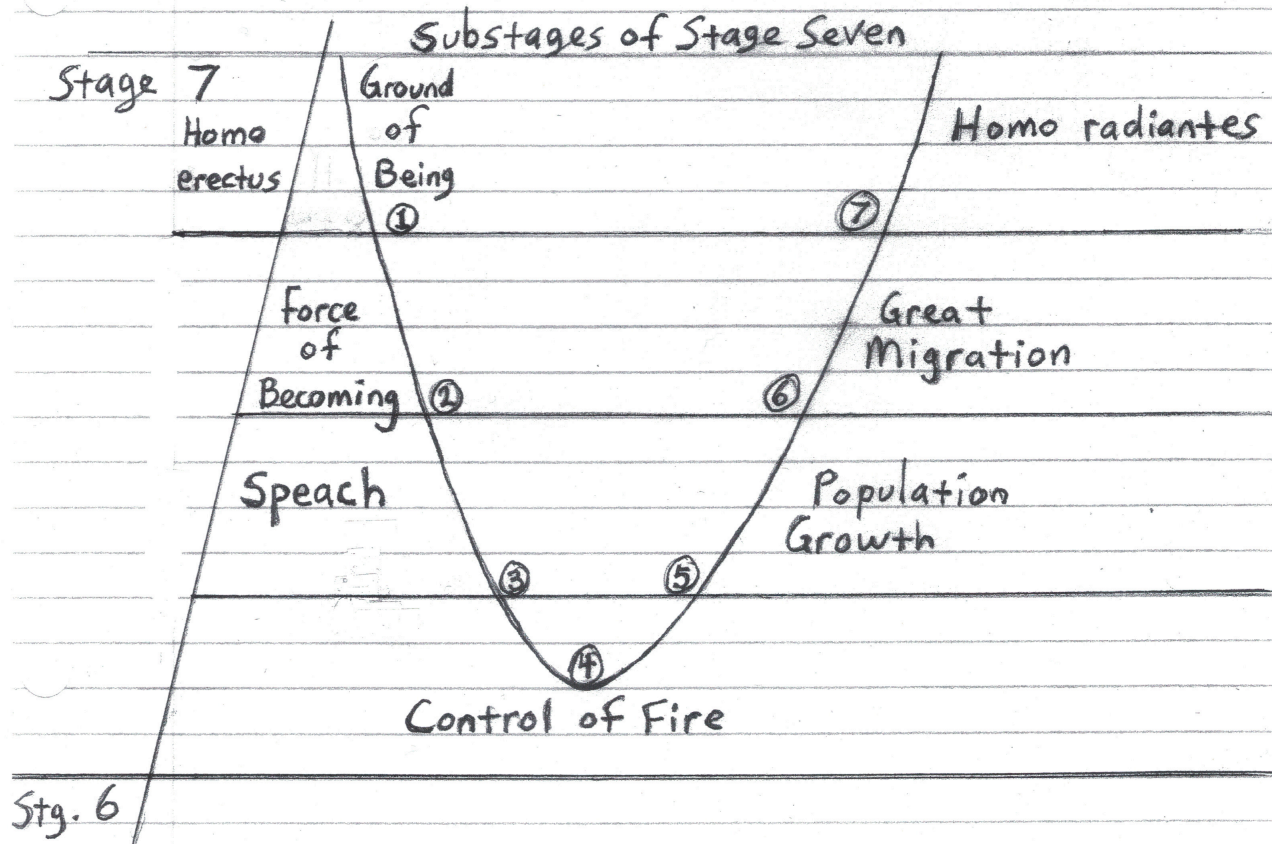

(Reintegration)

Transition / Disintegration
Metanoia, Chaos
Chrysalis

Homo radiantes / sub-stage seven

Purpose, Stewards, co-creators, reverent

Butterfly

Toxic Mimic of Culture

The Haber-Bosch Process that converts fossil fuels into synthetic fertilizer made possible the exponential population growth that came with the 'Industrial Revolution' and the 'Green Revolution'. That was a kind of false turn that began to separate us from the self-regulation inherent in living within the parameters of daily solar input and short carbon cycle (about 300 years) of the living biosphere. It turned us into "detritivores" which set us up for the dead end predicament that "Homo colossus" now faces.

Relying on "ancient sunlight" (fossil fuel) to grow our food has broken the nutrient cycle and has brought about the delusion that we are separate from the laws of nature. Operating this way interferes with our ability to cooperate with the laws of nature in a mutually beneficial, regenerative way that honors the reality: Life Creates the Conditions for Life.

Diversity is Resiliency

Times of rapid change exert evolutionary pressure on the biosphere and complex interactions among diverse living systems. A broad range of forms and qualities expressed by many, many different species, subspecies, and varieties provides a broad genetic base for Life to adapt to changing conditions.

There are too many interactive variables for us Humanimals to know which qualities will be most beneficial to the evolving biosphere that we depend on and are a part of.

Our technology heavy civilization is becoming so complex that we are handing more and more management tasks over to so called artificial intelligence. The ongoing environmental catastrophe is encouraging some to consider managing the biosphere with the help of AI. That could be extremely disruptive because:

1. It would divert immense amounts of energy to feed the required computing power.
2. Technological "solutions" are just more machine-world acceleration messing with a reflexive intelligence beyond our comprehension. When slowing down to pay attention more deeply would leave more room for the diversity of Life to regulate the biosphere.

Nature Resolves Conflict with Spirals

The phi proportion underlies the harmonious spinning, spiraling, fractal nature of the Universe with similar structure at every scale. Homo colossus transitioning to Homo radiantes seems to involve a transition from technology based on burning stuff to a way of life based on sound/light transduction and garden cultures. "All you have to do is invent the wheel in another dimension." - William Lonsdale When Mayan Day Keeper Hun Batz Men came to visit Tom Littlebear Nason, the Mayan messenger said "Mother Earth is going to teach us to fly." blessings now - Shumani

"Riddle of the Stone"?

The fantastic thing about the Mayan number/calendar system is it handles very large time cycles and their relations with simple elegance and great accuracy using THE basic unit of time for us earthlings: one day (one spin of Earth in relation to the Sun) and a nominal year of 360 days called a tun.

A long count is 13 baktun and a baktun is 400 (20×20) tun. So, a long count is $13 \times 400 \times 360$ days.

Times 5 is a precession cycle in days times 4 is what José calls a great arcturas cycles in days or 13×20 baktun.

One precession cycle may be what the Hopi call a World. When they say "we're entering the 5th world" that may refer to the Mayan long count date of Dec. 21, 2012 as not only the beginning of a new 5,200 tun long count but also begins a new 26,000 tun precession cycle.

2012 beginning a 5th precession cycle means 2012 also completed 4 precession cycles which is exactly the duration of a 104,000 tun "great arcturas cycle". However, referring to the Mayan system of reckoning extremely long cycles suggests that the great arcturas cycle turned over in the year 3114 BC - exactly one long count offset from the precession cycle turnover in 2012. This points out the significance of both the august 3114 BC date and the december 2012 date to the Mayan time keepers.

2012/2013 beginning the 5th precession cycle means we have entered the green Central precession cycle (E/Red, S/Yellow, W/Black, N/White, C/Green). Which is why José suggested that the new long count "explodes into a 26,000 year Moon genesis."?
